SUMMARY

Information Science student with a strong foundation in software development and machine learning. Eager to apply skills in creating user-centric applications and contribute to a real-world project environment.

EDUCATION

RV Institute of Technology and Management

BE, Computer Science and Engineering

GPA: 9.00

Expected 2027

DSPUC

PUC, PCMB

Percentage: 97%

Completed 2022

PSBB Learning Leadership Academy

CBSE 10 Grade

Percentage: 98%

Completed 2020

SKILLS

Programming Languages: Python, C++, Java, MongoDB, SQL

Technical AoE: AI, ML, Data Analytics, UI/UX, Git, AWS, GIS(QGIS, GEE)

Non-TechnicalAoE: Leadership, Teamwork, Communication, Empathy, Improvisation and Creative Thinking

PUBLICATIONS

• Selective Motion Deblurring Using Adaptive Spatial Filtering and Edge-Preserving Attention Networks

- Published in Published in the IOSR Journal of Computer Engineering (IOSR-JCE)– Volume 27, Issue 02

PROJECTS

• Selective Motion Deblurring Using Adaptive Spatial Filtering And Edge-Preserving Attention Networks

Tech Stack: Python, PyTorch, TorchScript, TensorRT

- Built a image deblurring system accurately detecting and restoring blurred regions, achieving 90.2% F1-score, 31.5 dB PSNR, 0.94 SSIM, and 25 FPS on RTX 3090.

• VIZURA : AI-Powered Business Process Automation Tool Suite

Tech Stack: Figma, Canva, HTML, CSS, Python, Scikit-learn, Seaborn, NumPy, Matplotlib, Supervised Learning Models

- AI-powered Business Process Automation (BPA) platform to automate visualisation of data for businesses using LLM integration, NLP based ESG compliance assessment, and ML based document processing, raising the operational business efficiency by 95% and sustainability practices.

• EnseM-AnoDe : Ensemble Model for Anomaly Detection in Wireless Sensor Networks

Tech Stack: Python, Scikit-learn, Seaborn, NumPy, Matplotlib

- A custom ensemble model combining energy aware versions of GWO-KNN, XGBoost Classifier, OC-SVM and IF. Models were combined to mitigate their respective weakness. Endpoints were exposed to allow ease of use.

• AI Enhanced Load Balancing for Distributed Cloud Storage in CloudSim Plus (Ongoing Project)

Tech Stack: Java, JMetal, CloudSim Plus

- The project leverages AI-driven load balancing and workload prediction to optimize resource use, reduce latency, and enhance responsiveness in dynamic cloud environments.

• Custom Coding Assistant for Unique Coding Task

Tech Stack: Python, Scikit-learn, Langchain, Groq, streamlit

- Built a wrapper around Llama -3.1b, augmented with a RAG Pipeline. The knowledge base was created to specifically for this task. The assistant was implemented as a basic webapp using streamlit.

WORK EXPERIENCE

• Content Research & Team Lead Intern at JITSIE, IITM

Sept 2023 – Dec 2023

- Developed a startup incubation platform in collaboration with JITSIE and AICTE. Managed 2 teams of 6 to research publish technical articles for The Business Sentinel, improving my leadership and research skills and my ability to work under tight deadlines with a high workload.

• Volunteer, Sathya Educare Competency Trust

Aug 2022 – Sept 2022

- Analyzed student performance data to evaluate teacher effectiveness for an NGO, providing key conclusions and recommendations to enhance educational outcomes for underprivileged children.

LEADERSHIP & EXTRACURRICULARS

• **Head of Alcoholics:** Competitive Coding Club at RVITM

• **Head of Operations & Logistics,** Organising Committee, RVITM

• **Head of the Theatre Team,** RVITM

• **KVPY Scholar 2020**

• **Operations Liaison.** MUNSOC. RVITM
